GENERATOR SET RATINGS

Stand-By ratings are continuous electrical service during the interruption of normal power. No overload capacity is specified at these ratings. Prime ratings available with variable loads are continuous, 10% overload capacity for one hour in twelve hours periods. Both ratings per BS 5514, DIN 6271, ISO-3046

Many industrial, commercial and residential voltages are available

- Four pole, revolving field, direct coupled to engine flywheel, provides excellent alignment.
- Insulation is of class H, ready to be used on harsh environments where sea spray, sand and chemical corrosion are existing factors.
- Voltage regulator provides Volts/Hertz compensation to improve the motor starting capabilities, therefore support the engine handling transient loads.
- Dynamically balanced rotor, with damper winding, help dissipate transient voltage interference during load variations.
- The windings have a 2/3 pitch in order to reduce the harmonic content of voltage.
- Robust mechanical structure permits easy access to connections.
- Robust industrial grade PERKINS diesel engine, for reliable endurance.
- Direct fuel injection system and swirl intake ports combine for a low fuel consumption and excellent transient response.
- Cylinder Head provides superior airflow through specially designed intake manifold ports, large valves and seats resulting in superior engine performance in torque reserve, fuel consumption and emissions.
- Extra strong engine block with provisions for overhaul.
- Dynamically Balanced Crankshaft, with induction-hardened journal surfaces significantly increases wear life.
- Heavy-duty Perkins engines are known for their fuel efficiency, responsive transient performance and rugged reliability
